

ADMINISTERING DEVICES IN DEPENDENCE  
UPON DEVICE CONTENT METADATA

ABSTRACT

5

Embodiments of the present invention include a method for administering devices within a network. Such embodiments typically include receiving, within the network, at least one user metric for a user, and receiving, from a device within the network, device content metadata. Such embodiments also typically include identifying an

10 action in dependence upon the user metric and the device content metadata, and executing the action within the network.
